**NET CONTENTS:**

### GENERAL INFORMATION

**STAKE** is a highly concentrated blend of emulsifiers and paraffin oil. The product is designed for use with a broad range of herbicides where an oil concentrate adjuvant is recommended. **STAKE** increases contact activity and penetration of the spray, while also providing uniform coverage on leaf surfaces at half the use rate of a standard crop oil.

Always follow herbicide label recommendations. Care should be taken in treating sensitive crops during drought stress, high temperatures and high humidity.

### DIRECTIONS FOR USE

To prepare for pesticide application, fill spray tank one-half full with water and begin agitation. Add pesticide or fertilizer as recommended and then add **STAKE**, while continuing agitation. Continue to agitate, until tank is full and agitate before and during each application.

**NOTE:** The effect of any adjuvant on a chemicals performance is not predictable under all conditions of weather, plant vigor, application methods and even water types. The user should consult his local agricultural extension agent or make his own tests to determine the optimum level of **STAKE** for special pesticide spray and crop.
