Cornbelt® N-Tense®

Maximum Performance Combined with Convenience

Cornbelt® N-Tense® contains water conditioning agents which improve the performance of certain pesticides by improving the quality of spray water.

Cornbelt® N-Tense® will help to alleviate antagonism from hard water impurities such as iron, calcium, magnesium and other impurities in the spray solution.

Cornbelt® N-Tense® will maintain certain pesticides, such as glyphosate, in their most active form and increase pesticide absorption into plants.

Always read and follow product labels prior to use.

Application Directions

N-Tense® use rates are 1-4 qts. per 100 gallons of water:

- 1-2 qts. per 100 gallons of water - when used as an AMS replacement for "loaded" glyphosate herbicides.

- 2-4 qts per 100 gallons of water - when used as a nonionic surfactant and AMS replacement for "unloaded" glyphosate herbicides.

1-2 qts. per 100 gallons of water - when used with herbicides containing paraquat or diquat.

Consult a West Central Solutions Provider for rate recommendations when using with other pesticides.

Package Size

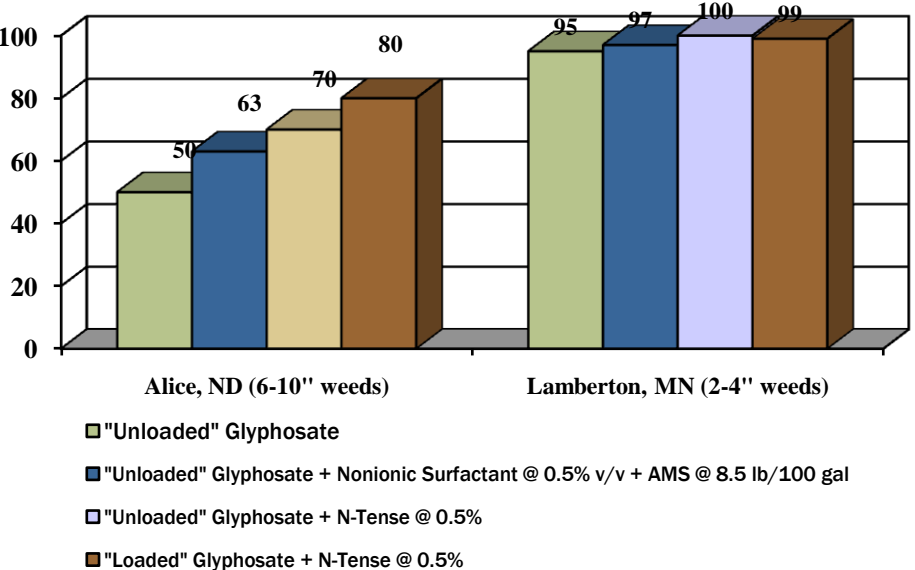

Cornbelt® N-Tense® is available in 2x2.5 gal, 30 gal and Repack containers.

Principal Functioning Agents

| | |
|---|-------------|
| Monocarbamide dihydrogen sulphate, amine phosphates, viscosity reducing agents..... | 95% |
| INERT INGREDIENTS..... | 5% |
| TOTAL | 100% |

Common Lambsquarters Control from Glyphosate with various Adjuvants

Always read and follow label directions.
