

CERIUM™ ELITE

- Premier patent pending surfactant that reduces drift
- Oil replacing adjuvant with enhanced crop safety
- Multi-functional, including deposition

Cerium™ Elite is a patent pending surfactant that can be used to replace traditional oil adjuvants. It is designed for use with herbicides, fungicides, insecticides, defoliant, desiccants, plant growth regulators, and any other crop protection product where an oil concentrate, nonionic surfactant and/or improved deposition is required or recommended.

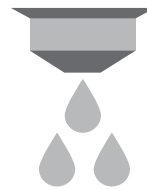

Cerium Elite provides the convenience and simplicity of a low use rate replacement for many oil concentrates that are typically used at 2-4 times the use rate of Cerium Elite. This technology is effective at reducing drift and off-target movement, to be as effective as possible across a wide variety of applications.

Cerium Elite does not contain ammonium sulfate or acidify the spray solution and is compatible with a wide array of herbicides including those that contain glyphosate, dicamba, 2,4-D and many others. Humidome trials with Cerium Elite have demonstrated minimal or no impact on pesticide volatility and wind tunnel trials with Cerium Elite have demonstrated reduced fine droplet formation from most pesticide spray solutions.

PRINCIPAL FUNCTIONING AGENTS

- A proprietary blend of polyalkoxy ethers of phospho (-azoethyl and -inosityl) diglycerol esters, fatty acids and nonionic surfactant 100%

APPLICATION DIRECTIONS

• Ground Application

For pesticides where an oil concentrate is recommended: 1 qt/100 gal of spray solution

• Air Application

For pesticides where an oil concentrate is recommended: 4-6 oz/acre
– Refer to pesticide label for minimum water volume/acre

Always read and follow label directions.

PACKAGE SIZES

- 2x2.5 gal
- 275 gal
