GENERAL INFORMATION
DEFOAMER is a water based, silicone emulsion, antifoam and defoamer. DEFOAMER can be used to prevent foam formation or knock down existing foam.

Use rates for DEFOAMER depends directly on temperature, composition, viscosity, agitation and other various conditions; therefore rates may require adjustment for the most effective dosage. Generally, use rates are lower when used as an antifoam to prevent or reduce foam formation.

DIRECTIONS FOR USE
Use DEFOAMER at 1/2 - 1 ounce per 100 gallons of solution. It may be necessary to adjust the amount used according to individual conditions. In situations where foam develops after the fluid level drops, stop agitation and add the recommended dosage of DEFOAMER. When foaming develops in urea water solutions, it may be necessary to use as much as 2 ounces of DEFOAMER per 100 gallons of solution.

HANDLING AND STORAGE
DEFOAMER will become thicker in cold weather and freeze. Freeze and thaw cycles may cause the emulsion to separate. Testing has shown that freezing does not significantly affect performance. Warming and shaking the container will help restore the material to its normal consistency. For optimum storage stability, store at temperatures between 40°F (5°C) and 90°F (32°C). Do not store near oxidizing agents.

CONTAINER DISPOSAL
Keep in original container. Do not reuse empty container. Triple rinse (or equivalent) during mixing and loading, then offer container for recycling or reconditioning, or puncture and dispose of in a sanitary landfill. Dispose of container in a safe manner in accordance with federal, state, and local regulations. Recycling decontaminated containers is the best option of container disposal.
